Step 1: Getting Started – Creating a Vignette

The first thing you want to do is create the classic vignette that the Lomos are well known for and I achieve this by doing a freehand lasso of a circle around the photo. It doesn't need to be perfect. You can also do "Select All" and contract the selection about 20px.

Step 2

Once you have set the feather (shown above) and have drawn the circle, you must invert the selection. You can do this one of two ways: #1 Shift-Cmd-I (Shift-cmd-I on the mac) or #2 Go to the menu Select>Inverse.

Step 3

Now to achieve the vignette, I add a Levels layer. Note: I still have the invert selected.

Step 7

Then I create a new layer and pick the brush tool.

Step 9

Reduce the opacity to 32 %.

Step 10

This has gotten us very close to be finished. Again, I flatten the photo by using shift-cmd-e (shift-cmd-e on the mac) or go to the menu and Layer>Merge Layers.

Step 11
